

Version: 10/01/2021

With proper maintenance, your engineered timber floor will retain its beauty for years to come.

.....

I. Maintenance Tips

DO'S

- DO sweep or vacuum the floor regularly
- DO clean up spills quickly
- DO place doormats at entrances to keep dirt and grit off the floor
- DO dust with a soft cotton or cloth mop
- DO use felt floor protectors under chair legs and furniture to prevent damage

DONT'S

- DO NOT use wax-based cleaners
- DO NOT use steel wools or scouring pads
- DO NOT use a steam mop on your engineered hardwood floor
- DO NOT use a vacuum cleaner with a beater bar
- DO NOT pour liquid directly on the floor or use an excessively wet mop that will puddle or leave moisture standing on the floor.

2. Cleaning Tips

- + First, use a soft broom or vacuum cleaner (do not use a vacuum cleaner with a beater bar) to remove dirt and grit.
- + Next, we recommend using a microfibre mop to damp mop the floors. Do not flood or leave puddles on the floor.
- + Use only cleaning products that are designed specifically for wood floors that are not acetone or solvent based. Using a vinegar and water dilution is not recommended.
- + Never use any kind of over-the-counter oil, oil-soap, solvent-based products to clean or maintain your floor. They will, with repeated use, erode the protective finish and dull the luster in your floor.
