about us

Wood Culture is Singapore's expert in Vinyl Flooring, Engineered Timber and Solid Hardwood.

At Wood Culture, we understand the importance of a good foundation. It is with this basis and passion for product quality and service that governs the way Wood Culture operates. Our surfacing products provide practical advantages in addition to realistic aesthetics. To ensure that every client is confident and comfortable with their selection, we are also committed to be involved in every stage of the project and will provide relevant information in the selection process, installation and maintenance of the product.

Led by a strong management team with knowledgeable expertise in the building industry for more than a decade, Wood Culture strives to provide you with the professional service that you will need for every residential or commercial project. Wood Culture serves developers, architects, designers, contractors and home owners.

Wood Culture is a subsidiary of Hafary Holdings Limited.

Engineered Oak: Ember #89

engineered timber

Engineered Timber delivers the authenticity and beauty of wood while providing structural stability. Harvested from sustainably managed forests, Wood Culture's Engineered Timber is an environmentally friendly material.

Quality

The construction of Engineered Timber features a layer of solid hardwood bonded over multiple layers of premium quality ply. The cross ply construction method allows for maximum structural stability, which assist to prevent the material from swelling or shrinking as a result of changes in temperature and humidity.

Beauty and Authenticity

The surface of Engineered Timber is made with solid hardwood, thus the beauty and authenticity of natural wood is not compromised. Also, with structural stability, Engineered Timber is able to offer wider and longer planks. This showcases more of the wood's natural grains and textures. The larger planks also creates a more elegant and luxurious space when installed.

Care & Maintenance

As Engineered Timber is made from wood, it requires the same cleaning methods as any other type of wood flooring. When cleaning, sweep or use a vacuum cleaner to pick up dirt and debris from the floor prior to mopping. Occasional damp-mopping with a wood cleaner is ideal to keep the longevity of the floor. Do wipe up spills as soon as they occur and keep grains of sand and debris away by placing floor mats at entrances. By doing so, the finish of the floor can be kept safe and intact for a longer period of time.

Updating the appearance of a space can be easy with Engineered Timber as it can be sanded, refinished and re-stained. With the proper care and maintenance, Engineered Timber can last you for many years to come.

engineered oak

Dimension L600-1800 x W189 mm | Thickness 15 mm | Wear layer 4mm

Natural #81
UV oil, matt finish
